

	CHAPTER – 22		
22	SUTAINABILITY AND GREEN ENERGY POLICY		
	Framed and implemented w.e.f. 01.01.2018, Latest update w.e.f. 01.06.2025		
22.1	Purpose		
	The Green Energy Policy aims to promote the adoption, generation, and efficient use of renewable energy within Knowledge Institute of Technology . It seeks to reduce the institution’s carbon footprint, encourage sustainable energy practices, and create a model campus for environmental responsibility, in alignment with national and global sustainability goals.		
22.2	Scope		
	This policy applies to: • All academic, administrative, and hostel buildings of the institution. • All faculty, staff, students, visitors, and contractors using energy resources on campus. • Any new infrastructure or renovation projects undertaken by the college.		
22.3	Objectives		
	• Renewable Energy Adoption – Increase the proportion of energy from renewable sources (solar, wind, biomass, etc.). • Energy Efficiency – Reduce electricity consumption through efficient appliances, smart systems, and behavioral changes. • Awareness & Education – Incorporate green energy concepts into curriculum, research, and student activities. • Compliance – Meet or exceed national and state renewable energy and environmental standards.		
22.4	Green Energy Initiatives		
	22.4.1	Renewable Energy Generation	
		• Install rooftop solar photovoltaic (PV) systems on academic blocks, hostels, and administrative buildings. • Explore wind and hybrid renewable energy systems where feasible. • Promote solar-powered street lighting and water heating systems.	

	22.4.2	Energy Efficiency Measures	
		• Replace conventional lighting with LED /energy-efficient fixtures @ 20% per year level. • Use energy-efficient HVAC systems in laboratories and seminar halls. • Install smart metering and energy monitoring systems to track consumption. • Implement automatic power shutdown system for idle equipment.	
	22.4.3	Green Campus Operations	
		• Encourage daylight-based classroom design to reduce artificial lighting usage in the new buildings and wherever possible in the existing buildings. • Use battery storage systems to maximize renewable energy utilization. • Reduce diesel generator dependency by hybrid systems with solar.	
	22.4.4	Procurement & Infrastructure Guidelines	
		• All new construction must follow green building norms released by the state / central governments • Preference for energy-efficient rated equipment in procurement. • Vendors must meet environmental compliance standards.	
	22.4.5	Education, Research & Community Engagement	
		• Offer student projects, internships, and research on renewable energy. • Conduct workshops, seminars, and exhibitions on green energy. • Collaborate with industry and government bodies for pilot projects. • To introduce Sustainability related courses in autonomous curriculum • To form clubs and forums to promote Green Energy and Sustainability	
	22.4.6	Roles & Responsibilities	
		• Green Energy Committee – Plan, monitor, and review policy implementation. • Electrical & Maintenance Department – Install, maintain, and audit renewable energy systems. • Faculty & Students – Participate in awareness campaigns and research projects	
	22.4.7	Monitoring & Evaluation	
		• Conducts annual energy audit and maintain the reports. • Set yearly renewable energy generation and efficiency improvement targets.	

	22.4.8	Funding & Support	
		• Seek funding from MNRE, AICTE, UGC, and CSR initiatives. • Allocate a percentage of the infrastructure budget for green energy projects.	
22.5		Policy Review • The Green Energy Policy will be reviewed every Three years by the authorities. • Amendments will be made based on industry trends, regulatory changes, and institutional priorities.
