

	CHAPTER – 23		
23	IT Upgradation Policy		
	Framed and implemented w.e.f. 01.01.2018, Latest update w.e.f. 01.06.2025		
23.1	Purpose		
	This IT Policy outlines the guidelines, standards, and procedures for the proper use, security, and management of information technology resources at Knowledge Institute of Technology. It ensures that IT resources are used ethically, legally, efficiently, and in support of the college’s academic, administrative, and research missions.		
23.2	Scope		
	This policy applies to: • All faculty, staff, students, research scholars, visiting faculty, alumni, and guests using the institution’s IT resources. • All IT assets owned, leased, or managed by the institution, including networks, servers, computers, laptops, projectors, Wi-Fi devices, software, email systems, and data. • Access to IT resources whether on-campus or remotely.		
23.3	IT Infrastructure - Overview		
	1	IT Infrastructure includes hardware, software, network resources and services. At KIOT, as on 01.06.2025, there are 1100+ computers, 12 servers, 60 laptops and 75 printers available.	
	2	In addition, the college has various software such as College wide common software like Microsoft Campus License, iStack ERP etc., Besides, all the departments have various domain specific software.	
23.4	Usage Guidelines		

		Users must: • Use IT resources solely for academic, research, and administrative purposes. • Follow all applicable laws including Copyright Act, IT Act, and data protection regulations. • Respect intellectual property rights and software licensing agreements. • Avoid accessing, creating, or distributing obscene, offensive, or malicious content. • Not engage in hacking, phishing, or other unauthorized activities.	
23.5	Hardware & Software Procurement		
	1	For any IT equipment procurement or upgradation, Head of the Department (HoD) ought to take prior approval from the Principal and submit to the purchase committee.	
	2	Identify the vendor and make an order based on the comparative analysis. High cost items are to be purchased through college purchase committee.	
	3	Bulk Procurement by combining the requirements of similar equipment should be encouraged to achieve optimum cost benefits.	
23.6	Hardware Repair & Maintenance		
	1	The entire campus IT infrastructure is maintained by System Administrator and technicians. Technicians are expected to check all the lab equipment's on a daily basis and ensure that all the machines are working properly.	
	2	If any hardware problem is detected by faculty or student, an initial entry should be made to Technician concerned. Upon identifying the service requirement, Technician will respond and make an initial inspection of the hardware equipment and resolve the problem. Any further queries or checks, it will be directed to System Administrator.	
	3	Responsibility: Technicians and System Administrator.	
23.7	Hardware Upgradation		
	1	KIOT always recommends branded PC Models such as ACER, HCL and Zenith. The department will track required PC configuration and components for new laboratory programs or courses and will submit a request in the next available budget cycle for an IT budget increase.	
	2	Department must be cautious about warranty checks and must take appropriate action if the performance of the equipment deviates from the expected performance.	

	3	After the completion of the warranty period, Department may implement the Annual Maintenance Contract (AMC) for the equipment depending on the criticality of its usage with the approval of the Management.
	4	The upgradation of equipment can be made through some components, like memory, HDD, Graphic card, Projector etc. or by replacing the whole device/equipment through a buy-back mechanism depending on the specifications and performance parameters of the equipment.
	5	Lower Configuration Systems can be utilized for the basic programming practices.
	6	A prior approval of specifications and requirement by the Principal is essential.
	7	Any disposal or scraping of components, the college e-waste management policy has to be adopted.
	8	Responsibility: Technician, Lab Faculty In-charge, System Administrator and HoDs
23.8	Software Upgradation	
	1	Existing software will be upgraded with newer versions each year or at regular intervals.
	2	Upgradation or new purchase of software will be made as per the curriculum requirement and industry standards.
	3	Faculty members and Technicians must also keep themselves updated about any new technology such as OS, Software that has been incorporated in their work place and be ready to address and handle it.
	4	Technicians will be responsible on managing system upgrades, renovate drives for the printer, scanner and any other equipment apparatus that faculty or student uses.
	5	Responsibility: Technician, Lab Faculty In-charge and System Administrator
23.9	Internet	
	1	At present the Internet bandwidth is 1.0 Gbps through fiber connections. It will be increased each year based on the need and guidelines from statutory bodies.
		• Access to campus networks will be provided through secure authentication (user ID and password). • Wi-Fi usage will be monitored for compliance with policy. • Bandwidth will be allocated to ensure equitable use and prevent misuse (e.g., high-volume personal downloads).

	2	Email & Communication Systems		
		• Official communication will be done through the institution-provided email IDs (e.g., rkcse@kiot.ac.in). • Mass mailing is permitted only to the groups assigned with individual email account. • Spam, Phishing attempts, and suspicious messages must be reported immediately.		
23.10		Firewall		
		Campus networks are protected by Tacitine Firewall . Unwanted resources are blocked by the firewall.		
		Default Block Category in Firewall • Standard malwares • Weapon • Phishing and fraud • Militancy and Extremist • Gambling • Pro-Suicide and self-Harm • Criminal Activity • Intellectual Piracy • Anonymizers • Sexually Explicit • Nudity • Advertisements	Applications Blocked <u>Students</u> Instagram, Telegram, Facebook, Online Games and other social media platforms	
23.11		Obsolescent Removal		
	1	Computer systems and other related hardware which are beyond upgradation, will be replaced with new systems / hardware following the e-waste disposal policy.		
	2	Based on the curriculum and research needs, existing software will be replaced with new / recent software.		
23.12		Policy Review		
		• The IT Policy will be reviewed every Three Years or need base by the authorities. • Amendments will be made based on industry trends, regulatory changes, and institutional priorities.
